

Curve Reamer™

About the Curve Reamer™

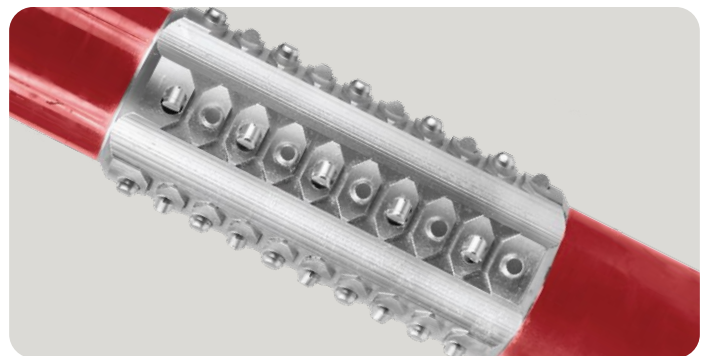

Ever had trouble getting your liner to the end of your lateral? Maybe you can't even get your BHA through the curve. Worried your 15 stage packer system won't run all the way to bottom without damaging vital components?

The Curve Reamer™ was designed to solve the problem of getting through the curve and lateral of horizontal wells. The tool uses a combination of cutting action and fluid flow to create a smooth wellbore.

No more stuck casing or sidetracks due to doglegs, ledges or an unshapely hole. Multi-stage packer systems will glide all the way to the toe so you can reap the benefits of all the footage you drilled in the lateral. The tool has had great success in many of the shale plays and the tougher the formation the better the Curve Reamer™ performs.

Features and Benefits

- ★ Diamonds and nozzles remove doglegs and ledges.
- ★ Compact design with no moving parts allows for hassle free reaming of the wellbore and assures pulling out of the hole without problems.
- ★ Bullnose design eliminates the risk of sidetracking.
- ★ Multiple nozzles engineered to clean the hole. Unique up jets lift cuttings out of the hole and clear cutting beds.

Sizes Available: 5½" to 8¾" (Custom Sizes Available on Request)

About Southern Oilfield Services

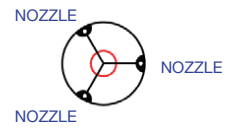

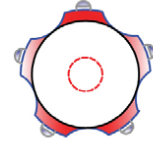

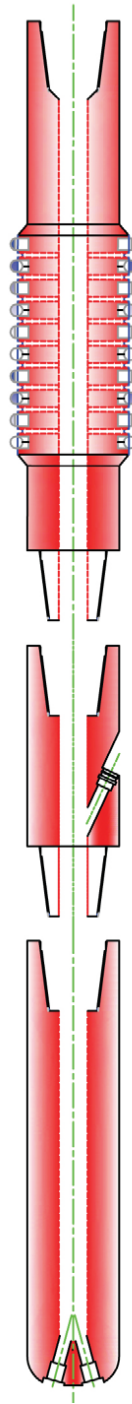

Southern Oilfield Services is based in Houston, Texas. SOS is a provider of superior and innovative downhole specialty tools. Underreaming is the foundation upon which the company was established and still remains a strong core and staple of the business. Our tools are designed with the goal of saving the customer rig time

and money. We pride ourselves in only using materials sourced from the USA.
